

ADJUSTMENTS
Thermic 20 glides best in small circles - turn adjustments are shown. If model dives, in glide turn up stabilizer in 1/4" (If very bad remove stab. and 1/4" angle. If model will stall for which and copy Thermic is good for all three types of launching - to obtain best results learn how to adjust

Black outline indicates the trimming

Finishing - After shaping with rough paper finish with 10-0. Preserve smooth surface with JASCO WOOD FILLER or GLASS FILLER. Do not use dope. If warped!

This glider would be an ideal candidate for experimenting with the Hi-Start method described elsewhere in this issue. For a full size plan, enlarge this plan 400% (if you really want to be picky, make it 390% to be exact. If you have no way of doing the enlarging, let your friendly editor know and he'll have a plan enlarged for you and send it to you for what it costs — probably a couple of bucks.
